

Sustainable Growth Analysis

How a country can attain sustainable growth?

Sustainable Growth Analysis

EXECUTIVE SUMMARY

- 13 years of data (i.e., 2000-2012) was taken of different countries/regions along with their continents and analysis was performed for different factors - GDP, Energy, Human Resources, Tourism and Business that impact GDP/Capita.
- It is seen that there is a positive correlation between Health Expenditure per capita and GDP per capita. This means that the countries that tend to spend more on health have a better/higher GDP.
- It has been observed that higher lending interest rates tend to have a negative impact on GDP.
- It has also been noticed that higher energy usage and higher CO2 emissions are more likely to increase the GDP.
- As the fertility rate increases (i.e., higher birth rates), there is a tendency to have a negative impact on GDP (i.e., lower GDP).
- The government of a country should further urbanization and boost tourism accordingly in order to enhance the GDP.
- To achieve better sustainable growth, the taxes levied on businesses should be reduced and the ease of business should be made more convenient to have a positive effect on GDP.

Sustainable Growth Analysis

ANNEXURE

Higher the Health Expenditure per Capita,
Higher is the GDP per Capita
(Positive Correlation)

Health Exp/Capita vs. GDP/Capita

Lower the Lending Interest,
Higher is the GDP per capita
(Negative Correlation)

Lending Interest vs. GDP/Capita

Sustainable Growth Analysis

ANNEXURE

Higher the Energy Usage,
Higher is the GDP per Capita
(Positive Correlation)

Higher the CO2 Emissions,
Higher is the GDP per capita
(Positive Correlation)

Sustainable Growth Analysis

ANNEXURE

Lower the Birth Rate,
Higher is the GDP per Capita
(Negative Correlation)

Higher the Population Urban,
Higher is the GDP per capita
(Positive Correlation)

Sustainable Growth Analysis

ANNEXURE

Higher the Tourism Inbound,
Higher is the GDP per Capita
(Positive Correlation)

Sustainable Growth Analysis

ANNEXURE

Lower the Business Tax Rate,
Higher is the GDP per Capita
(Negative Correlation)

Higher the Ease of Business,
Higher is the GDP per capita
(Positive Correlation)
